## Virginia Transformer

“Leading the Industry in Quality, Reliability, Lead Times, and Growth”

Highly trained technicians use a combination of skill and state-of-the-art equipment to manufacture transformers to the highest industry standards.

As the demand for reliable and resilient energy infrastructure grows across North America, **VIRGINIA TRANSFORMER** continues to lead the industry in producing high-quality power transformers delivered with the shortest lead times. With six manufacturing facilities in strategic locations across the continent and continued investment in expansion, we have 50-plus years of engineering experience, the widest product offerings, and the production capability to serve the largest customer base across North America for all markets and applications.

On the heels of achieving triple growth, Virginia Transformer is now hiring and expanding to do it again. We are strategically building our team for the next growth cycle and continue to make investments on behalf of our customers to expand our production capabilities, including the recently announced expansion of our Georgia Transformer plant in Rincon, Ga., where we will increase production by 70 percent.

In addition to topline growth driven by customer demand and satisfaction, Virginia Transformer has also experienced unprecedented growth

in employment, tripling the size of our workforce in three years. We are more than 5,400 people strong and known throughout the industry for being an engineering company that makes premium-quality transformers in the shortest lead times.

Each Virginia Transformer facility is ISO-certified and equipped for complete transformer design, manufacturing, and testing to cover the widest range of ratings and applications. Continuous improvement in process efficiency and quality control ensures our units meet or exceed industry standards including IEEE, ANSI, CSA, and more. We design each transformer with a 60-year lifespan for maximum reliability, performance, and uptime for decades to come.

Founded in 1971 and headquartered in Roanoke, Va., Virginia Transformer is the largest manufacturer of power transformers in North America, featuring a fully customizable product range from 500 kVA up to 500 MVA.
